The Professional Developer's #1 Choice for Communications, Security, & E-Business Components

Internet Communications

IP*Works! Products

TCP/IP **Secure SNMP**
SSL **Zip**
S/MIME **EDI AS2**
S/Shell

Our flagship product line. The result of more than a decade of research and development in building Internet connectivity tools for professional software developers.

Components for: Web and Web Services, Email and News, File Transfer, Sockets and Streaming, Remote Access, Instant Messaging, SSL and Secure Shell Security, Certificate Management & Creation, S/Mime Encryption, SNMP Network Management, File & Streaming Compression, and E-Business (B2B).

Internet Business

IBiz Integrator Products

QuickBooks **First Data**
E-Payment **USPS**
E-Banking **FedEx**
Vital/TSYS **Amazon**
Paymentech **PayPal**

The IBiz product line provides small and medium-sized companies with enterprise-class software components for Internet business integration. Built on top of our award winning IP*Works! tools, these easy-to-use components enable developers to rapidly integrate common business processes.

Components for: Accounting Integration (QuickBooks), Credit Card Processing, ACH / E-Check Processing, Shipping and Tracking, Banking & Financial Transactions, and Services Integration.

Enterprise Adapters

BizTalk & SQL Server Adapters

AS2 / EDI-INT **GISB / NAESB**
SFTP / FTPS **OFTP**
XMPP (Jabber) **Secure Shell**
SMS Paging **Secure Email**
AWS Integration

The /n software Adapters extend Microsoft BizTalk and SQL Server with advanced Internet communications, security, and e-business capabilities, including robust, highly scalable, fully integrated implementations of B2B messaging and secure communications protocols.

Components for: EDI-INT AS2 Integration, Secure File Transfer, Secure Shell Remote Execution, Secure Email, RosettaNet Connectivity, OFTP Integration, NAESB / GISB Messaging, and more.

/n software

/n software Red Carpet Subscription Q4 2007

Write communications, security and e-business applications.

- Includes components for FTP, IMAP, SNMP, SSL, SSH, S/MIME, Digital Certificates, Credit Card Processing and e-business (EDI) transactions
- Free updates, upgrades, tech support and new releases for a year

/n software Red Carpet Subscription

Communications, security and e-business components.

/n software Red Carpet Subscriptions give you everything you need in one package - components for every major protocol from FTP to IMAP to SNMP, SSL and SSH security, S/MIME encryption, Digital Certificates, Credit Card Processing, ZIP compression, Instant Messaging, Shipping and Tracking, and e-business (EDI) transactions.

There are no licensing restrictions, so you can code on your work machine, your notebook, or even your home machine. Plus there are no technology restrictions, so you get everything, .NET, COM, C++, Java, Pocket PC, Unix, Linux and even Mac OS X. You receive quarterly update CDs with free updates,

upgrades and new releases. It includes more than \$30,000 worth of software including: all /n software products - IP*Works!, SSL, S/MIME, S/Shell, Zip, EDI, IBiz Integrators for QuickBooks, Enterprise Adapters, E-Payment, Vital/TSYS, Paymentech, USPS, etc.

/n software Red Carpet Subscriptions includes IP*Works! which is a comprehensive framework for Internet development and is the core building block for most /n software products. IP*Works! eliminates the complexity of Internet development by providing easy-to-use, programmable components that facilitate tasks such as sending email, transferring files,

IP*Works!
Includes IP*Works! which is a comprehensive framework for Internet development.

IBiz Integrator Products
Components for Internet payment, accounting, management, and other common e-Business services.

Internet Communications
ATOM, REST, MX, DNS, RSS, NNTP, SMPP, POP, Rexec, Rshell, SMTP, SOAP, Telnet, Ping, TFTP, FileMailer, NetClock, FTP, HTTP and more.

S/Shell
Allows developers to rapidly build SSH secured applications including secure file transfer, secure remote login, secure email etc.

Secure Components
/n software Red Carpet Subscription includes secure versions of many of the IP*Works components.

Everything in One Subscription
There are no technology restrictions, so you get everything, .NET, COM, C++, Java, Pocket PC, Unix, Linux and even Mac OS X.

managing networks, browsing the web, consuming web services, etc. It includes support for all major internet protocols: ATOM, DNS, FileMailer, FTP, HTMLMailer, HTTP, ICMPport, IMAP, IPDaemon, IPInfo, IPMonitor, IPPort, LDAP, MCast, MIME, MX, NetClock, NetCode, NetDial, NNTP, Ping, POP, RCP, REST, Rexec, Rshell, RSS, SMPP, SMTP, SNPP, SOAP, Syslog, Telnet, TFTP, TraceRoute, UDPPort, WebDav, WebForm, WebUpload, Whois, XMLp and XMPP.

Also included in the subscription is IP*Works! SSL which is a suite of SSL-enabled components that are secure drop-in replacements for the components in the "classic" IP*Works! package.

The components are fast, robust, and reliable and consume a minimum of resources. They are small and lightweight with no dependencies on external libraries. Included are native development components for all supported platforms and component technologies.

IP*Works! includes a complete unified framework with a common easy-to-learn object model and simplified interfaces allowing you to be more productive. The components are rigorously tested and have undergone thousands of hours of testing. You also get detailed reference documentation, hundreds of sample applications and fully-indexed help files.

ComponentOne

ComponentOne Studio Enterprise 2007 v3

Over 180 components for .NET, ASP.NET, ActiveX + Mobile Devices.

- Full suite of rich and flexible .NET Windows Forms components
- Rapid development of innovative & demanding Web applications
- Now includes WYSIWYG rich-text editor for ASP.NET

ComponentOne Studio Enterprise

Create rich user interfaces for ASP.NET, Windows Forms, Mobile and ActiveX applications.

ComponentOne Studio Enterprise includes over 180 components for .NET, ASP.NET, ActiveX and Mobile Devices. It offers a complete solution that targets all runtime environments and all application layers (data, presentation, reporting and transformation).

The cornerstone of ComponentOne Studio Enterprise is the data layer, which encapsulates business logic in reusable assemblies called data libraries. This data layer provides a comprehensive data and business objects framework that serves .NET applications of any range, scalability, and architecture. The ComponentOne presentation layer consists of a suite of best-of-breed user interface controls that interoperate seamlessly with the data layer, combining data manipulation capabilities with flexibility in GUI design. The included Report Designer is a standalone application for creating XML-based report definition files at

design time. At run time, reports are rendered in a customizable preview control (WinForms) or as HTML (WebForms). The ComponentOne transformation layer extracts, converts, loads and saves data from a variety of heterogeneous sources, including popular file formats such as XML, PDF, and ZIP. It is used internally by the presentation and reporting layers, and is surfaced in standalone components such as C1Zip and C1Pdf.

The ComponentOne Studio Enterprise ASP.NET toolset includes eCommerce (PayPal), file format management (PDF, Flash, XLS, ZIP), calendars, charting (2D and 3D), rich text editing, grids, input and mask controls, menus and toolbars, reporting, scheduling and spelling features. The components are AJAX-ready and fully interoperate with Microsoft's ASP.NET AJAX Framework, so you can AJAX-enable your Web application without the need to

Schedule for .NET
Studio Enterprise includes Schedule for .NET, for developing Outlook-style desktop scheduling applications.

Dynamic Charts AJAX
Any chart can take advantage of the built-in AJAX support to dynamically render its image without postback.

Virtual Scrolling in C1WebGrid
AJAX-enabled virtual scrolling for a fixed-height grid with a vertical scroll bar is now available.

Webinput for ASP.NET
Includes enhanced TextBox control that uses an input mask to distinguish between proper and improper user input.

WebGrid for ASP.NET
WebGrid for ASP.NET includes advanced functionality like horizontal scrolling and fixed columns.

Create PDF Files
Create PDF documents from your applications. Supports security, compression, outlining, hyperlinking, and attachments.

understand the concepts of AJAX. The WebEditor component is a WYSIWYG rich-text editor for ASP.NET. It allows you to edit text in design, source (HTML) and split modes. It replaces any TextBox with an intuitive Microsoft Word like editor, which enables even non-technical users to easily author and manage HTML content. The customizable toolbar, built-in spell checker, and complete JavaScript client-side object model allow you to easily manipulate your text - with or without code.

The ComponentOne Studio Enterprise .NET Windows Forms toolset includes barcodes, charting (2D and 3D), grids, input controls, labels, editors, lists and combos, menus and toolbars, print and preview features, reporting, ribbon UI features, scheduling, file format management (PDF, Flash, XLS, ZIP) sizing, spelling and tooltips. Smart designers are included in select .NET Windows Forms components to allow you to set the components' most popular properties without leaving the design

surface. The included grid component uses ADO.NET to completely manage the database interface, offering the ability to browse, edit, add, delete, and manipulate tabular data.

The charting component is designed to be a feature rich, versatile and easy-to-use chart generation tool. You can create a wide variety of dynamic 2D and 3D charts that use cached or streaming data. The 2D chart control and 3D chart control allows for automatic generation of real-time applications, contours and zones allowing both you and your end users to create sophisticated 2D and 3D charts.

ComponentOne Studio Enterprise also includes four (grid, charting and zip compression) components for building .NET Compact Framework applications and a suite of 12 ActiveX products including True DBGrid, VSFlexGrid, reporting, charting and user interface components for developing applications with Microsoft Visual Studio.

ActiveReports for .NET helps you deliver hardcore reports on time, on budget, and with your sanity intact. You couldn't ask for more.

- Complete integration with Visual Studio .NET makes it a snap to create reports in a familiar environment.
- Flexible report controls like the chart, barcode, rich text box, and subreport controls provide the look needed.
- Versatile data binding makes it possible to use a variety of data sources in one report.
- Powerful exporting capability allows you to provide reports in the format needed.
- Royalty-free deployment eliminates extra costs for you and your customers.
- End-user report designer allows you to provide your end users with the reporting tools they need (Professional edition).
- HTTP handlers and the Web report server control make it easy to deploy and view server-based reports on the Web (Professional edition).

Optimized for
Microsoft
Visual Studio .NET

Data Dynamics

ActiveReports for .NET V3.0

The best selling report writer with no run-times or royalties.

- ActiveReports Designer now includes design-time preview tab
- Viewer control now supports annotations
- ActiveReports engine features seven new chart types

ActiveReports for .NET

Generate a wide variety of reports from your .NET applications (Now includes Visual Studio 2008 support).

ActiveReports for .NET lets you easily create reports via the fully integrated designer. It has a familiar user interface and supports C# and Visual Basic .NET. It includes a report creation API with complete run-time access to report objects and members and a fully exposed Object Model.

ActiveReports for .NET has the ability to host 3rd party .NET controls and user controls within your reports and includes export filters for Adobe PDF, Microsoft Excel, RTF, HTML, text and TIFF formats. It can be used in both Windows based and Web based applications.

ActiveReports for .NET also includes a Windows Viewer control that supports split and multi-page views, has a "Table of Contents" pane with a thumbnail view tab and can perform text searches of reports. It also allows you to customize the viewer's toolbar.

The Professional Edition of ActiveReports for .NET features an end-user report designer control that allows you to host the report designer in your own applications to provide end users with the ability to create and modify reports. It supports zooming to magnify the design surface of the report for more precise placement and viewing of report controls. It also includes a server-side Web Viewer control that takes advantage of ASP.NET's HTTP handlers to allow you to display reports without having to write custom code.

Reports can be previewed at design time by clicking the preview tab at the bottom of the designer and .NET data components can be dropped directly onto the design surface of a report, resulting in a visual representation of the data component in the new report component tray. This makes it easy to add custom datasets to an ActiveReport at design time.

Viewer Annotations
Annotations can be placed on the report to pass notes and special instructions on to users and developers.

End-User Report Designer Editing
Allow end users to edit their reports and save new reports or load old ones.

Viewing Web Reports
The WebViewer Control provided in the Professional Edition allows you to write less code and view reports more quickly.

OLEDB Data Sources
ActiveReports for .NET supports any .NET OLEDB data source.

3rd Party Controls
ActiveReports for .NET supports the use of Windows Forms-based 3rd party controls with the report designer.

Subreports
With ActiveReports, reports may contain any number of child reports by using the Subreport control.

Other features in ActiveReports for .NET include a chart control (3D area, 3D bar, 3D clustered Bar, 3D doughnut, 3D line, area, bar, Bezier, bubble, candle, doughnut, funnel, Gantt, HiLo OpenClose, Kagi, line, plotXY, point and figure, pyramid, renko, scatter etc.), updated memory management features, a rich text control that is capable of rendering HTML and RTF tables, and an integrated script window with syntax highlighting.

Data access in ActiveReports for .NET is via OLEDB and SqlClient report data sources. It binds to DataSet, DataView, DataTable, any RowCollection, and any class that implements the IList interface. The DataSource property can be modified at run time to create ad hoc (dynamic) reports or reports can be unbound. ASP.NET integration allows quick viewing of reports on the web with the Web Viewer control. ActiveReports for .NET provides printing capabilities with an ActiveX viewer and Acrobat Reader viewerType properties. It also provides an RPX file HTTP handler

to allow you to place a report on your web server and make it available via a hyperlink to your internet users in HTML or PDF. A compiled report HTTP handler is also provided to allow direct access via a hyperlink to a report compiled in an assembly on your server. The product is easy to deploy, the reporting engine is a single, managed, strongnamed assembly and assemblies can be distributed using XCopy or the global assembly cache (GAC).

ActiveReports for .NET also comes with a report wizard and a Microsoft Access report conversion wizard so you can start creating reports quickly. ActiveReports for .NET is written in managed C# and provides integration with the Visual Studio .NET IDE. This allows Visual Studio .NET programmers to leverage their current programming language (C# or Visual Basic .NET) when programming with ActiveReports for .NET. The product is based on a per developer licensing scheme, and it is royalty-free to distribute.

Developer Express

DXperience v2007 vol 3

All Developer Express ASP.NET, WinForms and tools in one package.

- Provides reporting, toolbar, treelist, grid and sidebar functionality
- Add Office style spell checking capabilities to your application
- Now includes scheduling/planning/calendar suite for ASP.NET 2.0

DXperience

All the Visual Studio .NET component suites, libraries and IDE tools produced by Developer Express in one package.

DXperience includes all Developer Express products engineered for Visual Studio and the .NET Framework. With this subscription, you receive all key technologies by Developer Express including IDE productivity tools, business application frameworks, and components for Windows Forms, ASP.NET and ActiveX. In addition to individual tools, you receive complete source code for Windows Forms and ASP.NET components. With the Universal subscription, you also receive eXpressApp Framework which is an instrument for creating business applications quickly and easily.

Windows Forms and ASP.NET products include: XtraReports Suite - a reporting tool that features an extremely easy-to-use report designer and XtraCharts Suite - a 2D/3D charting solution.

Windows Forms products include: XtraGrid Suite - a grid control with four data layout options from a simple table to banded multi-line row layout and card views, XtraBars Suite - a complete range of navigation and window layout management tools, XtraScheduler Suite - enables you to incorporate the UI found in Microsoft Office Calendar to your applications with just a couple of mouse clicks, XtraPivotGrid Suite - a

XtraBars Suite Ribbon Control and Tabbed MDI interface
With the XtraBars Suite you can easily build Ribbons from scratch.

XtraBars Suite
You can create application menu, galleries and contextual tabs in ribbons.

XtraGrid Suite
The XtraGrid Suite not only allows flexible data presentation, it offers you one of the fastest grids in the market.

XtraGrid Suite Master-Detail
The XtraGrid has true support for Master-Detail data presentation. You can use a View of any type as a detail even a Card View.

XtraReports End-User Designer
The XtraReports Suite features a fully functional End-User Designer.

XtraReports Master-Detail Report
With the XtraReports Suite, you can easily build banded reports and even Master-Detail reports.

data analysis, data mining and visual reporting solution, XtraTreeList Suite - a hybrid tree-view and grid control that has both bound and unbound data access options, XtraVerticalGrid Suite - a 90 degrees rotated grid where records are arranged one after another from right to left, XtraNavBar - a navigation control allowing you to build side-bars, explorer bars and Office style navigation panes, XtraEditors a library of over 20 editors that can be used both standalone or embedded, XtraPrinting Library - a data rendering and visualization system allowing you to construct any printed pages from scratch or print Windows Forms controls like the XtraGrid and XtraSpellChecker - a Microsoft Office style spell checking component.

ASP.NET products included: ASPxGridView and Editors Library - a robust grid and data editors library for ASP.NET, ASPxPivotGrid Suite - a multi-dimensional analysis component, ASPxNavBar Suite - Web navigation bar with full AJAX support, ASPxMenu Suite - an extremely lightweight, customizable main and context menu and many more.

Also included in Universal and Enterprise Editions: CodeRush, Refactor! Pro, eXpress Persistent Objects and 6 ActiveX products (grids, bars, editors, printing etc.).

Priority technical support is also included with updates and upgrades for 1 year.

FarPoint Technologies

Spread for Windows Forms V4.0

Allow developers to easily present, edit and update their tabular data.

- Now features Outlook style grouping, right-to-left support, undo/redo, export to HTML/XML and more
- New cell types include list box, multi-column combobox

Spread for Windows Forms

Formulas
Spread includes over 300 built-in functions and gives you the ability to define your own.

Cell Types
Spread includes many different cell types including: barcode, button, checkbox, color picker, combobox, currency, data time and hyperlink.

Frozen Rows and Columns
With Spread you can freeze both columns and rows at the end or beginning of the sheet.

Sorting
Spread allows the user to click on column headers to perform an altering ascending/descending sort of the rows in that column.

Grouping
You can group rows or columns into outlines as you do in Excel.

Desktop Spreadsheet
Use Spread to create your own desktop spreadsheet application.

Easily present, edit and update tabular data.

Spread for Windows Forms is a comprehensive spreadsheet component for Windows Forms applications that combines grid capabilities, spreadsheet functionality and includes the ability to bind to data sources. A single control can handle up to 2 billion sheets, each with up to 2 billion rows and 2 billion columns. Cross-sheet referencing allows calculations to make use of data and formulas on a variety of sheets.

Styles and formatting can be applied at the sheet, row, column and cell level. You can control the appearance and the user interaction in a variety of ways. With most of the Spread's appearance and functionality based on underlying models, the developer has complete control over the component.

Spread for Windows Forms can handle data from comma-delimited text files

as well as multiple spreadsheets from Microsoft Excel files. The contents of a sheet may be saved as a Microsoft Excel file or stream, text file, or as a Spread XML file.

You can bind the control to a data set, such as data in a database, or to anything that the .NET framework allows, such as an IList object. When you bind the component using the default settings, data from the data set is read into the columns and rows of the sheet to which you bind the data. Columns are associated with fields, and rows represent each record in the data set. Spread for Windows Forms can also automatically update the data set with the changes. You can also allow part of your spreadsheet to be unbound and you can also bind to a range of cells.

You can specify the way a user interacts

with a cell, including how data is entered, displayed and validated by specifying the cell type. The cell type defines an editor control for the cell that handles data entry, a formatter control to handle how the data is interpreted, and a renderer control that handles how the data is displayed in the cell. Examples of cell types are check box cell, date-time cell or a simple text cell. Cell types can be set for individual cells, columns, rows, a range of cells, or an entire sheet.

You can have multiple sheets within a workbook. Each sheet is a separate spreadsheet and can have its own appearance and settings for user interaction. Each sheet has a unique name and sheet name tab for easy navigation between sheets. You can add, remove, copy, insert and hide sheets. You can freeze (make unscrollable) a number of either rows

or columns or both in a sheet. You can freeze any number of top rows (called leading rows) or any number of left-most columns (called leading columns). You can also freeze any number of the trailing bottom rows or trailing right-most columns.

Spread for Windows Form's Calc Engine includes over 300 built-in functions, supports cross-sheet formula referencing, and gives you the ability to define your own custom functions. With formulas, you can: specify a cell reference, use a circular reference, nest functions, recalculate and update formulas automatically, allow the user to enter formulas, create and use a custom name and custom function.

Formulas include: database, date and time, engineering, financial, logical, math and trigonometry, statistical and text.

Unify and simplify development with a complete and flexible set of tools.

IBM Rational offers a complete set of team development, collaboration, and process management tools to help improve the efficiency and the quality of your work. So your team can deliver from anywhere, any time of the day or night.

Quality and performance in the software delivery lifecycle

Solutions for automated software testing.

Quality and performance aspects of governing software delivery and operations is high on the agenda of today's companies.

Why choose IBM® Rational® Quality Management solutions? Make confident go/no go decisions with:

- Single integrated software quality management platform for improved reliability, predictability and team efficiency across the software lifecycle.
- Superior functional testing with test automation and data sharing for streamlined, efficient test execution.
- Integrated traceability of business, functional requirements, use cases, and SLAs for accurate test case planning.
- More thorough performance testing both pre and post deployment for reduced system downtime.
- Integrated web application security and compliance testing.
- Wide range of platform and application support including Web, Java, Web services, J2EE, .Net, SAP, Siebel, Oracle and IBM mainframes.

IBM Watchfire® AppScan® 7.5 The latest acquisition to the IBM Rational portfolio.

Web Application Security Scanning: Comprehensive results and customisable features.

In the race to push more business services online, web applications frequently suffer from a lack of built-in security. The resulting vulnerabilities represent an easy path for hackers to access or steal corporate or personal data and information. Web application vulnerability scanning represents the best way for security auditors to defend against such targeted attacks.

Watchfire® AppScan®, the worldwide market-share leading web application security scanner with more than a third of the global market share, is trusted by more security professionals to provide

the visibility and control necessary to address this critical challenge. Watchfire® AppScan offers a solution for all types of security testing – outsourced, desktop-user and enterprise-wide analysis – and for all types of users – application developers, quality assurance teams, penetration testers, security auditors and senior management. Watchfire® AppScan's patented scan engine continuously audits web applications, tests for security and compliance issues and provides actionable reports with fix recommendations.

Seamless integration with leading QA tools, including Mercury Quality Center,™ development environments such as JBuilder and Visual Studio,

and Fortify's Code Scanner further simplifies security testing and remediation throughout the software development process.

IBM Rational Architecture Management

Software development that responds to your changing business needs.

IBM Rational Software offers industry-leading architecture management tools to help ensure the integrity of software architecture and keep your projects in alignment with requirements - even through multiple rounds of changes.

Choose IBM Rational architecture and construction software development tools and deliver resilient applications that enable you to:

- *Manage your evolving architecture and maintain architectural integrity throughout the software development process.*
- *Reuse existing services and benefit from reuse of software assets maintaining quality, corporate compliance and eliminating redundant work with Rational Asset Manager.*
- *Eliminate manual error prone software development and achieve faster application delivery by focusing on business logic.*

IBM Rational Build Forge Express Edition

Automates and accelerates the software build and delivery lifecycle leveraging existing tools and platforms.

IBM® Rational® Build Forge® Express Edition provides enterprise-grade build management and release management to improve software quality and accelerate software and systems delivery.

Feature	Benefit
Web-based console for user access and administration	Repetitive tasks are standardised and reused for multiple projects to ensure process consistency and reduce new project set-up time
Automates process for build and release management	Bill-of-materials list changes and content of builds for accurate testing, problem resolution and compliance management
Distributed multi-platform builds	Your current scripts and tools plug right in, regardless of platform
Correlates data from disparate source control, testing, and defect tracking tools to give a "one-stop" view of product development	Provides a documented audit trail of process changes for compliance management
Open command line interface that's compatible with existing build scripts, batch files, development tools, and other processes	Users of source code managers, defect tracking and test managers can create seamless links between configuration management and build environments for increased efficiency and tracking of source code, defect and test changes
Threading allows you to break down builds into discrete, non-dependent processes that run concurrently	Accelerate build times, optimise your hardware environment avoiding unnecessary hardware expense
Captures, documents, and retains vital processes as they evolve over time	In-depth knowledge of the underlying processes is not required

IBM Rational ClearCase and ClearCase LT

IBM® Rational® ClearCase® offers reliable, scalable and flexible software asset management for midsize-to-large development teams.

IBM® Rational® ClearCase® LT is a reliable, entry-level version control tool ideal for small to medium collocated project teams. Plus it offers a seamless upgrade to the full version of IBM Rational ClearCase to meet evolving business needs without retraining, retooling or migrating data.

Feature	Benefit
Sophisticated version control	Manage files, directories and other development assets across the lifecycle
Automated workspace management	Gain control over personal workspaces and enable seamless access to the exact files and directory versions that are needed
Parallel development support including automatic branching and advanced merging and differencing technology	Work on the same code or release more easily resolve conflicts, reduce confusion, and get more done in a short amount of time
Transparent, real-time access to files and directories	Fast access to virtually any version of any element
Support for disconnected usage	Continue development efforts while disconnected from the network, easily synchronise changes when reconnected to the network
Activity-based change management	Define and manage related changes to assets as activities for improved insight and efficiency
Integration with IBM Rational Asset Manager *	Maximise development asset reuse across projects
Build and release management	Optimise build times, improve reproducibility of builds
IBM z/OS® development support including ISPF client and z/OS build agent *	Provide unified enterprise application development allowing z/OS developers to work either on or off host
IBM System i™ development support including System i5™, iSeries™ and AS400® software assets	Manage and control System i5, iSeries™ and AS400® software assets
Local, remote (WAN) and Web client access	Access from the environments and locations from which developers work
Integration with leading IDEs including Rational Application Developer, Microsoft Visual Studio 2005 and the open source Eclipse framework	Allows developers to work in their preferred environment
User authentication	Control access to software assets
Audit trails	Trace the origin and detail of changes made to software assets, help meet compliance requirements
Scalability from small workgroups to geographically distributed enterprises	Support evolving organisational needs
Integration with design, development, build, test and deployment tools	Manage and control software assets across the lifecycle

* These features are not available on ClearCase® LT.

IBM Rational

IBM Rational Application Developer V7.0

Accelerates J2EE and Portal development and improves code quality.

- Shortens the Java learning curve through visual design, with auto-synchronized code modeling
- Uses robust capabilities to create SOA applications

IBM Rational Application Developer

IBM® Rational® Application Developer extends Eclipse with rapid development.

IBM Rational Application Developer helps Java developers create Java/Java Platform, Enterprise Edition (J2EE), portal, Web services and service-oriented architecture (SOA) applications. This integrated development environment assists in rapidly designing, developing, assembling, testing and deploying these applications. Its visual tools can be leveraged to reduce manual coding by abstracting the J2EE programming model, making it easier for those less familiar with Java technology to complete development projects. It is designed to be a highly flexible development tool - based on the Eclipse open framework and with a range of flexible installation options.

It's hard to incorporate new technology into existing processes, so IBM has designed flexibility options into its IBM Rational Application Developer product to help make it easier to use - beginning with installation. The flexible installation process provides a choice of options at a granular level, enabling each member of the development team to access only the functions needed and to optimize the size of the desktop installation.

IBM Rational Application Developer supplies full J2EE 1.2, 1.3 and 1.4 compatibility, and it supports Java 5 code across all configurations. It includes full support for Enterprise JavaBeans (EJB), message-driven beans, EJB Query Language, Container-

Java Development
Accelerates J2EE, portal, Web Services and SOA application development.

Collaboration
Create components that can be reused allowing you to collaborate and share assets across the team.

Database Development
Configure data controls, specify which data columns to display and how to display them.

Visual Editors
Includes visual editors for Java with event handling to build Java technology application GUIs with AWT, Swing, and SWT components.

Code Assist
Reduces the amount of code you have to type by inserting proposals automatically.

Web Services Development
Deploy and test Web services into the WebSphere Application Server or Tomcat test environments.

Managed Persistence (CMP), Web archive (WAR) and enterprise archive (EAR) deployments.

Several visual tools in the IBM Rational Application Developer software product ease the development process - whether you need to create an interface, connect the application or interface to data, build a portlet, create application logic or analyze the application at a greater level of abstraction. To test applications before deployment, the software includes unit test environments for multiple configurations of IBM WebSphere® Application Server software. What's more, it can automate WAR and EAR assembly processes for test and deployment. It provides the tools you need to discover, create, build, test, deploy and publish new Web services applications or enable

existing applications as Web services Interoperability (WS-I)-compliant Web services. It also lets you automatically generate from existing assets the Web Services Definition Language (WSDL) and Web Services Inspection Language (WSIL) files needed to describe Web services and prepare them for inspection, or you can design a WSDL file and generate Java code from it. A redesigned WSDL editor and Web Services Explorer tool help you to easily create, validate and detect WS-I-compliant, interoperable Web services.

You can encode input and output messages through support for both Simple Object Access Protocol (SOAP) and the open Apache Extensible Interaction System (AXIS) specifications, and you can create a Java proxy to interface with client applications.

Infragistics

NetAdvantage for .NET 2007 Volume 3

Create commercial class user interfaces for .NET applications.

- Includes ASP.NET and Windows Forms editions, plus annual subscription and full .NET source code
- No-Touch AJAX for ASP.NET with easy Office 2007 styling

NetAdvantage for .NET

Add grid, ribbon, scheduling, toolbar, menu, listbar, tree, UI and editing functionality to your .NET, Visual Studio 2005/2008, ASP.NET and Tablet PC applications.

NetAdvantage for .NET is a presentation layer toolset for quickly and easily building and styling polished application UIs and delivering a great user experience, for Windows Forms, ASP.NET and Tablet PC.

Designed with the user experience in mind, NetAdvantage for .NET user interface controls give you the ability to focus on business logic while it takes care of the presentation. Use the modern look and feel of Windows Vista styles and navigation or emulate the Office 2003 and Office 2007 user experiences with predefined color tables and ribbon controls.

NetAdvantage for .NET has what you need to add no-touch AJAX to your Web site with a professionally polished UI. The product includes many Windows Forms and ASP.NET components: grids, charts, combos, desktop alerts, button calculator, dropdown, progress bar, scroll bar, tooltips, editors, gauge, listbar, listview, printing, scheduling, spell checker, tabs, toolbars and trees. NetAdvantage for .NET also includes a Document Export Engine for PDF and XPS formats and provides web crawler optimization, AJAX support and SharePoint integration. WinGrid (included in NetAdvantage for .NET) is a hierarchical data grid control with full

Application Styling
Design Once, Style Everywhere for Windows Forms and ASP.NET. You can quickly create and apply corporate standards across controls.

AJAX
NetAdvantage for ASP.NET is AJAX-enabled. Full support for ASP.NET AJAX Extensions is included.

Scheduling
NetAdvantage includes calendaring and scheduling components.

Spell Checker
NetAdvantage for .NET includes functionality to spell check a RichTextBox, TextBox and cells in an UltraGridColumn.

WinCalcManager
You can use the WinCalcManager with standard edit controls and with WinGrid.

Documents Exporting Engine
Infragistics Document Export Engine is a complete class library for writing PDF and XPS documents.

support for bound and unbound data display. WinGrid supports complex data entry scenarios, custom layouts, rich printing and print preview, easy interop with Microsoft Excel and Adobe PDF file formats, and an almost unlimited array of look and feel options.

WebSchedule (also included in NetAdvantage for .NET) provides everything necessary for a full featured scheduling Web application including day, week, month and calendar view. It includes a non-visual component that coordinates information between these views and the data provider. This extensible provider model permits your own data provider to adapt an existing data model to WebSchedule, or you can easily roll out with the predefined WebSchedule data model supplied

in Microsoft Access and SQL Server form. NetAdvantage for .NET is a true framework, not just a collection of disparate controls. Infragistics worked hard before writing a line of code to devise a mature architecture based on shared assemblies and common object models. The effort to learn the first of the interface elements lets you learn the rest much easier. It also makes it easier to create standardized interfaces for your applications and even create your own elements by extending and inheriting visual elements from the Infragistics Presentation Layer Framework. NetAdvantage for .NET tools work natively with Visual Studio 2005/2008 and include Application Styling for Windows Forms and ASP.NET (Office 2007 styles, Vista styles, etc.).

Creating a Composite WebPart for Microsoft® Office SharePoint® 2007

The WebPart framework is one of the core extensibility models of Microsoft Office SharePoint 2007 Web applications. A WebPart is a special kind of WebControl that can be added directly to a SharePoint page. Microsoft has provided an impressive collection of WebParts to get you started, but there are often cases where your business requirements force you down a different path. The good news is that building custom WebParts for SharePoint isn't as difficult as you may think – and it is made even easier with Infragistics' NetAdvantage for ASP.NET.

When building your WebPart, your first decision must be made early: should you derive from the .NET Framework WebPart class or the SharePoint WebPart class? If you're planning on targeting earlier versions of SharePoint as we are in this article, you'll want to use the SharePoint WebPart class. Otherwise, the recommended approach is to use the .NET Framework defined System.Web.UI.WebControls.WebParts.WebPart class.

While the WebPart class can be overwhelming at first, don't panic. The only method we're really interested in is CreateChildControls. If you've built composite controls in the past, you should already be familiar with this method. CreateChildControls is called automatically by the underlying control framework. It is critical that this method only gets called once, since it will actually be stuffing items into the Controls collection. The base control framework provides a safety net to prevent duplicates through the use of the EnsureChildControls method. Whether you call EnsureChildControls once or 100 times, it will only call CreateChildControls a single time.

Inside of your CreateChildControls override, you'll want to instantiate your composite pieces and add them into the Controls collection. Take a look at the following example which creates a WebGrid and WebGauge.

```
private Infragistics.WebUI.UltraWebGrid.UltraWebGrid _Grid = null;
private Infragistics.WebUI.UltraWebGauge.UltraGauge _Gauge = null;
protected override void CreateChildControls()
{
    //Call base functionality
    base.CreateChildControls();

    //Create our Gauge and Grid, and store as Member Variables
    this._Grid = new Infragistics.WebUI.UltraWebGrid.UltraWebGrid("MyCustomGrid");
    this._Gauge = new Infragistics.WebUI.UltraWebGauge.UltraGauge();
    this._Gauge.ID = "MyCustomGauge";

    //Add the controls to our Controls Collection
    this.Controls.Add(this._Grid);
    this.Controls.Add(this._Gauge);
}
```

The most important piece of your CompositeControl is now complete. Since the controls are now being added to the Controls collection, they will be rendered when the composite WebPart is rendered. All that's left to do is configure the controls according to your requirements and provide the data. Just remember when you need to access one of the composite pieces (e.g., WebGrid or WebGauge) directly, call EnsureChildControls first. Otherwise, you'll end up with one NullReferenceException after the next. I like to add Properties which wrap my member variables and call EnsureChildControls inside of the getter to keep my code clean and simple.

For more information on compiling and deploying your WebPart, including the full source code from this example, please visit infragistics.com/webpart-article

Software FX

Chart FX 7

Add interactive charts and images to your Web and Windows applications.

- Totally rewritten to take advantage of Visual Studio enhancements
- Smart Tag Wizard provides a powerful yet familiar interface
- Redesigned UI integrates into Smart Client and ASP.NET applications

Chart FX 7

Chart Types
Choose from over 20 different chart types including 3D Bar, Area, Bar, Bubble, Financial, Gantt, Line, Pareto, Pie, Radar-Polar, etc.

Printing
Using the Printer Object, you will have control over margins, paper orientation, color or pattern printing, amongst others.

End User Experience
The ChartFX toolbar, context sensitive menus and dialogs provide an easy way for the end user to change visual attributes.

Passing Data
Chart FX supports passing data from databases and text files such as XML.

Multiple Axes
Advanced features such as logarithmic scales, multiple axes as well as axis sections and panes are all included.

Selecting the Chart's Output
Chart FX supports a method called RenderToStream that allows the developer to select the type of desired output for your charts.

Chart FX integrates seamlessly into Visual Studio to provide developers with Enterprise level data visualization capabilities.

Chart FX takes full advantage of the .NET Framework and cutting-edge technologies such as AJAX to create visually-rich, lightweight and secure charts that will enhance your Enterprise application's display layer. Chart FX is compatible with Visual Studio Themes. Any changes that you make to a Theme are extended to the Chart FX controls on the page. A Silverlight add-on is also available to Chart FX users to allow developers to add Chart FX functionality to their Silverlight-based web applications. Chart FX can bit-stream directly to a browser and includes a DHTML rendering engine that uses AJAX (Asynchronous JavaScript and XML) to produce chart images that allow full interactivity and support state in Web applications. The

DHTML rendering engine automatically updates the chart with the new data without a complete page refresh, only updating the portion of the chart that changed. The charts are fully secure as there are no binary files to download. This allows end users to interact with charts in any browser on any platform, making your application available to a wider audience.

Chart FX supports a variety of data population methods, including, passing data directly through the API, resultset binding, XML files, collections, arrays, arrays of arrays, text files and crosstab. It supports over 20 different chart types (bar, Gantt, area, line, step, curve, bubble, pie, doughnut, pyramid, combination, scatter, financial, surface,

contour, radar, polar, statistical, etc.) and includes customizable legends, ready-to-use color palettes, multiple and customizable axes, per-marker attributes, gridlines, background images and border objects. Chart FX provides run-time data analysis tools for your end users; these include drill downs, tooltips, drag and drop axis configuration and highlighting. Among all these tools, highlighting is a feature that allows end users to position the mouse in any chart element allowing Chart FX to instantly dim out other elements in the chart. This feature allows end users to quickly detect trends and other important elements in the chart. Chart FX provides developers advanced charting features with minimal integration effort. Helpful tools like the Chart Wizard, Tutorial and Samples Resource and a Programmer's Guide will assist you in creating visually impressive

data visualization solutions with little time invested. Chart FX includes a comprehensive API and properties list allowing you to access complex functionality. Chart FX also makes full use of Visual Studio Smart Tags, and takes advantage of this infrastructure to build a fully functional Wizard that allows developers to quickly access Chart FX main features. This Smart Tag Wizard provides the basic datasource configuration option available to other controls in Visual Studio, so you can quickly create and/or connect to an existing database or dataset in your project.

PSS Support is an integral part of Chart FX and it is now able to work in Web Farms, without limitations, on Server Affinity. This feature helps keep your charts secure by taking advantage of .NET's authentication mechanisms.

Telerik

Telerik RadControls for ASP.NET Q3 2007

The market leading UI suite for ASP.NET.

- Includes WYSIWYG Editor, fast AJAX Datagrid & navigation controls
- Features updated versions of RadGrid, RadChart and RadCombobox
- Backed by industry leading technical support

Telerik RadControls for ASP.NET

RadControls for ASP.NET is a professional toolset designed to help ASP.NET developers deliver feature-rich, standards-compliant and cross-browser compatible Web applications on budget and on time.

Telerik RadControls for ASP.NET is a complete toolset for building web solutions with the UI richness and responsiveness of desktop applications.

Easy to use and customize, the controls provide full support for ASP.NET AJAX and Visual Studio 2005/2008, seamlessly integrate in MOSS and WSS and are fully standards compliant (WAI-A, WCAG 1.0, XHTML 1.1). Additionally, the provided out of the box UI themes (such as Office 2007, Web 2.0, WebBlue) boost the professional look and feel of commercial applications, enhance the end-user

experience, and significantly reduce UI development time.

What's included: RadInput - highly customizable component for controlled data input (masked textbox and date input). RadCalendar - lightweight calendar control with native AJAX support, multi-view mode, previous/next month and preview panes. RadUpload - AJAX-enabled multi-file upload control which uses a proprietary HttpModule to minimize server memory usage. RadToolBar - flexible component for implementation of tool-

Telerik RadControls
Telerik RadControls is a UI suite for ASP.NET, combining highly-efficient client-side rendering with unsurpassed client-side functionality.

Telerik RadChart
Telerik RadChart is a business-oriented charting component with a focus on development productivity and ease-of-use.

Telerik RadGrid
Telerik RadGrid is a fast client-rich Datagrid for ASP.NET, designed to provide a desktop-like user experience.

Telerik RadCalendar
Telerik RadCalendar is a lightweight yet highly advanced date input control for ASP.NET.

RadGrid Selecting/Sorting
Telerik RadGrid offers out of the box client-side multi column/row select and multi-column sorting.

RadGrid Filtering
RadGrid can automatically determine the expression set applicable for each column based on the data type of the field.

strips found in most web applications, RadGrid - designed to eliminate the typical tradeoff associated with ASP.NET grid controls rich functionality at the expense of weight and performance. RadCombobox - a component for building drop-down interfaces, RadEditor - a WYSIWYG rich-text editor that can replace any TextBox with an intuitive Word-like editor, RadPanelbar - a versatile component for building collapsible side-menu systems. It was developed to facilitate the typical left/right-side navigation, which cannot be achieved using dropdown menu components. RadChart - a business-oriented charting component with a focus on development productivity and ease-of-use. RadChart allows you to rapidly build appealing charts that

represent data in a people-friendly manner. RadSpell - a multilingual spellchecker that enables developers to add multilingual spellchecking capabilities to their ASP.NET applications. Plus many more ASP.NET components.

The optional subscription license comes with a Gold Support Package (up to 24h response time), full C# source code, redistribution rights and free updates for the latest products for 1 year.

The Telerik tools work without license keys and can be freely deployed on any server. A 580-page self-paced tutorial and hundreds of code samples are provided to accelerate your learning.

End-to-end UI for ASP.NET

From the trendsetters at Telerik

RadControls

FOR ASP.NET

- The fastest AJAX Datagrid
- The industry-standard WYSIWYG Editor, inline spellchecker
- Innovative Web Scheduler
- Super-light navigation controls with semantic rendering
- Effortless application skinning, Office 2007 themes included
- Hundreds of examples and videos, 580-page self-paced tutorial
- Widest cross-browser compatibility on PC and Mac
- Full integration with Microsoft SharePoint 2007 (MOSS)
- Industry-leading technical support

 **telerik**
deliver more than expected

Telerik Reporting. The Art of "Easibility".

Flexible royalty-free tool for easy creation and styling of Win, Web, and PDF reports.

 **telerik**
Reporting

- New "Report Wizard" with predefined themes and templates for effortless report creation
- New Conditional Formatting, Filtering, and Parameters, all with integrated Expression Builders
- Data Connection Wizard for codeless binding
- Support for all OLE DB providers (SQL Server, MySQL, Oracle, etc), Business Objects, MS Access, XML, Web Services
- Fine-grained CSS-like styling
- Fully customizable layout with rich set of measurement units
- Variety of export formats - PDF, Image, HTML, CSV
- Effortless data import from Crystal Reports and Active Reports*
- Royalty-free distribution

deliver more than expected

Actipro Software

Actipro SyntaxEditor V4.0

Powerful code editing control with VS.NET style productivity enhancements.

Actipro SyntaxEditor

Editing C# code
SyntaxEditor with optional .NET Languages Add-on editing C# code using automated IntelliPrompt for parameter info.

Editing VB code
SyntaxEditor with optional .NET Languages Add-on editing VB code uses automated IntelliPrompt for member lists.

Editing an XML language definition file
SyntaxEditor can edit an XML language definition file based on an XSD.

- Develop and distribute custom language definitions with your applications
- Supports language merging e.g. HTML calling CSS, VBScript, etc.
- Perform semantic parsing operations in a separate worker thread

SyntaxEditor is designed from the ground up to handle advanced language parsing and processing, with phases for performing lexical parsing, semantic parsing (in a worker thread), and automatic outlining. Custom language definitions can be developed and distributed with your applications.

SyntaxEditor includes a complete parser generator that helps build semantic parsers and construct ASTs. Major code editing features of the control include code outlining, undo/redo, word wrap, split views, current line and bracket highlights,

column guides, virtual space, block selection, macro recording/playback, indicators (breakpoints, syntax errors, etc.), text statistics, extensible rendering, IntelliPrompt code snippets, member lists, parameter info, quick info, smart tags, FontDropDownList and TextStylePreview controls, and more.

SyntaxEditor is written in C# and includes 20 customizable language samples, including many of today's popular languages like C#, VB, XML, and HTML. Visual Studio .NET 2003 and Visual Studio 2005 compatible.

Aspose

Aspose.Total V1.4

Create, manage and convert many popular document formats.

Aspose.Total

Aspose.Cells
Aspose.Total includes Aspose.Cells which lets you create and manage Excel spreadsheets without requiring Microsoft Excel.

Aspose.Words
Aspose.Total includes Aspose.Words which lets you read, modify and write Word documents without utilizing Microsoft Word.

Aspose.Pdf
Aspose.Total includes Aspose.Pdf to create PDF documents without utilizing Adobe Acrobat.

- Supports Word, Excel, PowerPoint, Project, PDF and Flash file formats
- Demos written in C#, VB.NET and Java highlight the best practices for implementing many common tasks

Aspose.Total offers every component that Aspose has available as well as all new components released during the annual subscription. Aspose.Total includes a set of components that support the most common document formats like MS Word, MS Excel, MS PowerPoint, MS Project, PDF, RTF, CSV and tab delimited documents allowing developers to create, manage and

convert one format to another.

Aspose.Total also contains components for charting, email, spell checking, barcode creation, ad hoc query generation, recurrence patterns and workflow. Aspose.Total is available in two editions: .NET and Java.

Actipro SyntaxEditor for WinForms

The ultimate syntax-highlighting editor control for .NET

- ◆ Mimics the Visual Studio code editor
 - ◆ Create custom language definitions
 - ◆ Code outlining and word wrap
 - ◆ Indicators (breakpoints, squiggle lines)
 - ◆ IntelliPrompt member lists, code snippets, parameter & quick info tips
 - ◆ Over 100 stock editing commands
- Optional .NET Languages Add-on**
- ◆ Advanced C# / Visual Basic languages
 - ◆ Automated IntelliPrompt based on live source code editing & assemblies
 - ◆ Document outlining (over 100 AST nodes), XML comment auto-complete
- Optional Web Languages Add-on**
- ◆ Advanced XML language
 - ◆ XSD-based IntelliPrompt/validation

Actipro WPF Studio

Jumpstart your WPF application's UI with over 40 controls

- ◆ Bundled suite includes all Actipro WPF controls at one low price
- ◆ Office 2007 style ribbon UI
- ◆ Galleries, color pickers, popups
- ◆ Date/time pickers, calendars
- ◆ Wizard dialogs, bar codes
- ◆ Animated transitions, reflections
- ◆ 1 year of support & free upgrades

Atalasoftware

Atalasoftware DotImage Document Imaging V5.0f

Add server-side image viewing, editing and scanning to your applications.

Atalasoftware DotImage Document Imaging

Hole Punch Removal

Document cleanup - removes hole punches from documents.

Speck Removal

Document cleanup - remove specks from documents making them much cleaner and easier to read.

Binarize

Document cleanup - converts a greyscale or color image to black and white.

- Includes an imaging class library, WinForms control library, AJAX enabled server-side image viewer, TWAIN component and annotation
- Runtime Royalty free options are available for .NET suites

Atalasoftware DotImage Document Imaging is an advanced document imaging toolkit that can add high performance image viewing, editing, printing, scanning, and annotating support to an application. With DotImage Document Imaging you get a professional document imaging toolkit providing high performance scale-to-gray display, TWAIN scanning, auto-deskew, despeckle, border removal, noise reduction, advanced

binary thresholding, multi-page TIFF, and PDF support. It includes an imaging class library, a Windows Forms control library, DotTwain for advanced TWAIN scanning, DotAnnotate for full featured annotation and Atalasoftware's AJAX-Enabled Server controls for ASP.NET for thin client image viewing, scrolling, zooming, annotating, thumbnail viewing, and editing. Full documentation is integrated into Microsoft Visual Studio .NET.

*Where Your Customers Turn First
for Knowledge and Automated Support*

Deploy online support information with this next generation knowledge base system:

- Create knowledge on the fly or import existing documents and databases
- Provide a support site with searchable knowledge and live support channel
- Benefit for an ASPNET architecture for a fantastic user experience

Contour Components

ContourCube V3.0

Interactive reporting, data analysis and reports distribution.

ContourCube

Embedded business functions
Rich library of business functions includes popular business and statistical algorithms like trends, time variance, weighted averages.

Wrapping long strings
Text wrapping mode makes report more visible and valuable for users who work with reports containing long strings

Dynamic captions and filter area wrapping
Dynamic captions show selected value, so filters behave just like dropdown lists.

- Comprises many popular business and statistical algorithms
- Supports fast direct data loading from multiple sources
- Includes XP, Classic and Flat appearance styles with text wrapping

ContourCube is a high-performance OLAP component for rapid development of Internet, client-server and desktop business intelligence applications. It provides a highly dynamic interface for interactive data analysis, sophisticated analytical, statistical, reporting and graphing features. ContourCube can get data from any data source of your application via ADO, BDE, ODBC and unbound data source; just drop it onto a form in your project, link to your data and get the benefits of OLAP. ContourCube performs OLAP

operations on hundreds of thousands of records without an OLAP server. It allows end users to perform OLAP and statistical analyses using current data from any relational database. They can build and print reports interactively simply with a click and drag & drop (with sub-second response times), dynamically interact with data: move rows and columns, filter data, drill-down, roll-up, pivot table and get all possible reports from one dataset. ContourCube will make millions of calculations simultaneously and show new subtotals and totals instantly.

Dart Communications

PowerSNMP for ActiveX V2.8

Enable communication with network devices and applications.

PowerSNMP for ActiveX

SNMP Agent
Create a SNMP agent which includes service support.

SNMP Explorer
You can create an explorer-like view of available SNMP agents.

SNMP Manager
Create a SNMP manager that queries for basic variables, either by discovery or specific address, and shows how to set values.

- Develop specialized SNMP network management applications
- Process SNMP traps received by your application
- Load MIB files and export it in a custom format

PowerSNMP for ActiveX is a collection of controls that enable management of network devices and applications, via SNMPv1 or SNMPv2 and the ASN.1 standard with the highest available standards compatibility and speed. It includes an Agent control and a Manager control - with a suite of supporting objects that include a Management Information Base (MIB)

object for loading and parsing MIB files, an SNMP message object for encoding/decoding packets, an SNMP table object and much more.

With it you can integrate SNMP into any VBA-enabled application (Visio, AutoCAD, MS Office, etc) or create an application for custom monitoring of routers and other network devices.

TOP 50 PUBLISHER

Desaware SpyWorks V8.0

A core set of advanced programming tools for Visual Basic.

SpyWorks

Control and Configure Services
Includes a framework for authoring control panel applets similar to NT Services. Test them using the Visual Basic IDE.

Alias DLLs
Create alias DLLs which provide support for Dynamic Export Technology.

System Analysis
Analyze the system menu and regular menu for any window in the system.

- Take full advantage of the capabilities of Windows including API functions
- Intercept the low-level message stream for any application or entire system
- Features improved handling of Windows hooks

SpyWorks is an ActiveX component collection intended for developers who need a core set of advanced programming tools for Visual Basic 5.0/6.0. SpyWorks exposes the underlying operation of the Windows system that is hidden by Visual Basic, thus allowing developers to take full advantage of all of the capabilities of Windows including API functions,

ActiveX Extensions, the Desaware API Class Library and more. Use SpyWorks if you need to intercept messages in your own or another application to detect when it closes or activates, create a background thread in an ActiveX DLL, intercept keystrokes to add "hotkey" support to an application, or call an API function indirectly or any of a dozen other things.

DEVPIA DEXTUpload .NET Pro V3.6

Add the ability to upload files to your web applications.

DEXTUpload .NET Pro

Single and Multiple Uploads
DEXTUpload.NET allows you to upload single and multiple files.

Upload Progress
You can display a custom progress bar during the upload process.

Watermarking and Image Format
DEXTUpload.NET allows you to upload and watermark images and change image formats.

- Allows upload of upto 2GB files
- Use of optimized parsing algorithm makes uploading speed even faster
- Able to upload files to a database via a BLOB (Binary Large Object)

DEXTUpload.NET Pro is a component that supports file downloads and uploads between a web browser and an IIS web server. It observes Internet standards (RFC 1867) and can be used in Microsoft ASP.NET. DEXTUpload .NET Pro is HTTP-based and serves to upload files from web browsers to a web server quickly and efficiently. DEXTUpload .NET Pro overcomes the limitations of ASP.NET uploading (inconsistency for high capacity file uploads, server overloads and safety, etc.).

speed and stability compared to existing ASP file upload components. During uploads and download you can invoke a progress window automatically without installing any other software. The pop-up progress window shows you uploading speed, file size, uploaded file size and time remaining. It can also be customized by using progress objects.

You are able to watermark uploaded images and convert uploaded images to thumbnails. It supports various file conversion formats (BMP, JPG, GIF etc.) and it provides detailed information about image files.

It is written in C# and provides you with considerably improved upload

Thousands of people use your software. (Hundreds bought it.) Licensing should not be an afterthought.

We hear it everyday. The caller has completed the project, and it's almost ready to ship - but wait, what about licensing?

Fortunately, the Desaware Licensing System is flexible enough for almost any application. From standalone Windows applications, Windows services, and web services, to web applications - even class libraries, the DLS is up to the task. Ideal for distributing software, or securing your enterprise software.

Desaware Licensing System

Supports .NET 3.0 and Vista

New features for version 1.5

- ◆ New storage options for license certificates.
- ◆ Improved support for licensing web services and ASP .NET web applications.
- ◆ AJAX enabled ASP .NET server control for entering license codes.

Download a fully functional 30 day trial version today. Includes complete documentation and examples.

- License unlimited applications - no distribution fees.
- Base price includes everything you need - no hidden costs.
- Includes activation server and management tools.
- Use the standard .NET component licensing framework or bypass it completely.
- Cryptographic based licensing - no secrets to discover.
- Implement tight activation based security or less stringent security scenarios.
- Easily implement module based licensing, subscription models, etc.

Janus WinForms Controls Suite

Add powerful Outlook style interfaces to your applications

Janus GridEX for .NET

Janus GridEX is a control capable of working in bound fashion with ADO.NET or IList data sources. The control supports hierarchical display of data and permits you to create effective user interfaces similar to Microsoft Outlook®, while easing development and maintenance time. The functionality provided by the control allows you to display, format, edit, sort, group, filter, manipulate, summarize, preview and print your data. Standalone MaskEdit, MultiColumn Combo, and UpDown controls are also included.

Janus Ribbon & Command Manager Controls

Janus Command Manager and new Ribbon controls are also included in the suite. These controls provide Windows developers with stylish menus and toolbars. The components permit advanced customization of the menus and toolbars of your applications. Use the built in VisualStyles in the controls to easily provide your applications with a look similar to Windows XP, Office 2000, Office XP, Office 2003 or 2007.

Janus Timeline Control for .NET

The Janus Timeline Control is ideal for displaying items in relation to time. Items in the control are arranged in chronological order from left to right on a time scale that can be divided from seconds to years. You can easily load, display, format, group, filter, edit and manipulate items with the functionality available in the control in both bound and unbound modes.

Janus Schedule for .NET

The Janus Schedule control can present appointments and related owners in different Views, representing Days, WorkWeeks, Weeks, and Months. The control also supports working with recurrent appointments. You can easily load, display, format, filter, edit, manipulate, preview, and print appointments with the functionality available in the control in both bound and unbound modes. A stand-alone Janus Calendar Combo Control, used to edit date and time values, is also included.

Windows Forms Controls

A suite of controls designed to provide powerful user interfaces for Microsoft .NET Smart Client applications patterned after Microsoft Outlook®. All of the controls in the suite are 100% C# managed controls designed to be used with Visual Studio® 2005.

Janus WinForms Controls Suite includes the following controls:

Janus GridEx for .NET

(Outlook Grid)

Janus Schedule for .NET

(Outlook Calendar View)

Janus Timeline for .NET

(Outlook Journal)

Janus ButtonBar for .NET

(Outlook Shortcut Bar)

Janus ExplorerBar for .NET

(Outlook Shortcut Bar)

Janus UI CommandManager

(Menus and Toolbars)

Janus PanelManager

(Outlook / Visual Studio .NET panes)

Janus TabControl

(Tab Control)

NEW!

All controls now feature Office 2007 look & feel plus Ribbon Bar

LEADTOOLS

You're An Instant Imaging Expert!

LEADTOOLS v.15 - Now with 64 Bit Support!

Application development and modern programs require more image integration every day! LEAD Technologies gives you years of experience in image programming instantly! Still frame Color, Grayscale, Document, Medical, Vector, Mobile and Internet Imaging to advanced printer drivers, Multimedia, Codecs and Compression technology, LEADTOOLS has what you need to complete your imaging project on time!

- 150+image formats including TIFF, GIF, PNG, JPG (1-64 bits/pixel)
- Display (scroll, zoom, pan, dither, level)
- 200+image processing functions/compression/color conversion
- High-speed TWAIN scanning
- Advanced document compression (ABIC, JBIG2, LEADTOOLS ABC)
- Bitonal doc clean-up (border, line, dot and hole punch removal)
- Comprehensive annotations (text box, rubber stamp, button, note)
- OCR/ICR/OMR & Barcode recognition
- PDF support (read/write) with MRC compression
- 12-16 bit, 32 bit grayscale imaging
- DICOM and DICOM communications
- Multimedia formats (MPG, AVI, WMV, MP4, MP3, OGG, etc)
- Video on demand, streaming video, DVD creation and burning
- 2D and 3D vector image formats (DWG, DWF, DXF, DRW, etc)

LEADTOOLS SDKs feature LEAD's iCompress™ Technologies.

LEAD Technologies

LEADTOOLS Raster Imaging Pro V15.0

Precision image control - used by Corel, HP, Kodak and Microsoft.

LEADTOOLS Raster Imaging Pro

Image File Formats
Load and save files in many different raster file formats.

Compression Support
Compress images into lossy or lossless image formats, using market-leading compression techniques.

Spatial Image Manipulation
Stretch and Shear images.

- Includes API, .NET class, C++ class library, ActiveX and VCL toolkit
- Load, save and convert over 150+ raster image file formats
- Supports TWAIN, screen capture and database connectivity

LEADTOOLS Raster Imaging Pro is a .NET Class Library, C++ Class Library and DLL Imaging API SDK with 150+ raster file formats (JPEG, GIF, TIFF...), image processing with 2000+ effects, Image transforms and filters, extensive loading and viewing options, TWAIN scanning, printing, thumbnail browser, Internet and database imaging functions, compression, screen

capture, drawing, color conversion, Internet/intranet imaging, graphics conversion, common dialogs, etc. It also includes digital paint functionality for developers who need to incorporate paint capability into their applications. The included LEADTOOLS Raster Tile Image Viewer, enables you to add fast, interactive image viewing into your ASP.NET 2.0 web applications.

Macrovision

InstallShield Professional 2008

Create high-quality Windows Installer, server and mobile installations.

InstallShield

Welcome Assistant
InstallShield includes a helpful welcome assistant to get you up and running quickly.

Application Information
The Application Information page requests general information about your application.

Installation Architecture
You can customize your Installation Architecture by configuring the features that are included in your installation.

- Minimize the need for reboots with the Restart Manager infrastructure
- User Account Control (UAC) support and digital signature enhancements provide improved security for software installation

InstallShield allows you to create flexible installations quickly and easily across all Windows operating systems. First-time developers find it easy to create installations, while power users find its depth and flexibility perfect for developing complex software installations. InstallShield includes support for UAC, Restart Manager, Windows Vista validation testing, Windows Installer 4.0, expanded digital signing capabilities and more.

The InstallShield IDE, automated wizards, templates and pre-built objects saves you significant time and effort. The Project Assistant walks you through the setup building process, increasing your efficiency while helping you avoid errors. InstallShield also comes with Trialware functionality which allows developers to add more flexibility into their setup projects (InstallShield Premier Edition Only).

Macrovision's Bulletproof Deployment Solution

Dramatically reduce your application deployment costs while increasing overall corporate productivity

InstallShield™

Create Powerful and Flexible Installations Quickly and Easily across All Windows Operating Systems.

Build a better product with the confidence that comes from using the latest tools. InstallShield lets you:

- Stay current with support for the latest Microsoft technologies—Windows® Vista, .NET 3.0, Visual Studio 2005, SQL Server 2005, and more
- Optimize your installations for Windows Vista with support for UAC, Restart Manager, Certified for Windows Vista validation testing, Windows Installer 4.0, digital signatures, and more
- Maximize team efficiencies with support for **InstallShield Collaboration**—a plug-in for Visual Studio

InstallAnywhere™

Create One Installation for Multiple Platforms and Languages

InstallAnywhere delivers the ideal combination of ease-of-use and powerful functionality to create professional multiplatform installations. InstallAnywhere offers full support for the broadest range of target systems and new capabilities for team development and accessible Section 508-compliant installations.

- Extensive platform support—Mac OS X, Linux, Windows, AMD-64 and more
- Simplified and standardized software deployment
- Support for **InstallAnywhere Collaboration**—an add-on tool for Eclipse that lets you maximize team efficiencies

AdminStudio™

How Enterprises Prepare Reliable Software Packages for Deployment

AdminStudio makes it easy for IT to prepare reliable software packages and virtual applications for error-free deployment. It combines powerful software packaging technology with Web-based process management tools that help you cut packaging time by 70%.

- Easily migrate software to Windows XP and Windows Vista
- Improve deployment success rates to 99% – and better
- Reduce your IT costs and improve application reliability
- Manage the entire packaging process with Macrovision's **Workflow Manager** (sold separately)

Syncfusion

Syncfusion Essential Studio Enterprise 2008

Accelerate WinForms and ASP.NET development with 150+ components.

Syncfusion Essential Studio

Essential Grid
Features Excel like grid functionality implemented using a style based architecture.

Excel Reading and Writing
The included Essential XlsIO components let you create sophisticated Excel reporting in your business applications.

Windows Forms and ASP.NET Charting
Offers over 15 chart types and an innovative data object model.

- Includes grids, docking, charting, diagramming, PDF & Office reporting and scheduling with a solid architecture
- 1 year of support and updates; no royalties, runtimes, or server fees

Syncfusion Essential Studio includes Syncfusion Essential Tools, Essential Grid, Essential Grouping, Essential XlsIO, Essential Diagram, Essential Chart and Essential Edit. It incorporates a unique debugging support system that allows switching between 'Debug' and 'Release' versions of the libraries with a single click from inside the Visual Studio.NET IDE. Dynamic and

feature-rich, Syncfusion Essential Studio is everything developers need to create enterprise-class applications.

Also included is Essential TestStudio, which enables automated testing of Syncfusion controls using Mercury Quick Test Professional. Syncfusion Essential Studio comes with 1 year of support and updates.

TX Text Control .NET Enterprise Edition V14

Read, edit, and create documents in HTML and Microsoft Word formats.

TX Text Control .NET

Character and Paragraph Formatting
All formatting options expected from a word processor are available.

Bullets and Numbered Lists
Bullets and numbered lists can be inserted, incremented and numbered from program code or manually.

Headers and Footers
All of TX Text Control .NET's vast array of character formatting can be applied to the text that appears in a header or footer.

- Standardized WYSIWYG interface supports drag and drop
- Supported formats include DOC, RTF, TXT, HTML, CSS, XML and PDF
- Provides full integration with Visual Studio .NET

TX Text Control .NET supports tables, object linking and embedding, database access, bulleted and numbered lists, and more. It even supports drag and drop so you can drop text in directly from other applications. It supports the following word processing formats: DOC, RTF, TXT, HTML, CSS, XML and PDF. Other features include: headers & footers,

images and stylesheets XML and stylesheet programming, Unicode, multi-lingual dialog boxes. TX Text Control .NET also features advanced Internet functionality allowing you to create applications that run directly in Internet Explorer, and there is also an HTML filter so you can support writing and reading documents in HTML.

Abstraction Systems

ToolTipsFactory for .NET V1.2

Advanced, single/multi-line text, image and animated image tooltips.

- Includes 4 types of tooltip controls; SingleLine, MultiLine, Image and Animation
- All layout elements are fully customizable in code or through Visual Studio

ToolTipsFactory for .NET

ToolTipsFactory for .NET is a set of components designed to add visually and functionally sophisticated ToolTips to Windows Forms applications. These components give application developers the possibility to add really dynamic tooltips to their applications, with single or multi-line text, images or even animations as content. They also give programmers full control over size and layout of the ToolTip's background, border and behavior.

If you are creating multi-line tooltips the number of lines is only limited by

the size of the selected font and the vertical screen resolution. If you prefer images in your tooltip, ToolTips Factory for .NET provides icons, photographs, dynamically created drawings etc. The images can be assigned at design time in Visual Studio .NET, loaded or dynamically created at run-time by the application.

ToolTipsFactory for .NET is 100% managed code and includes full Visual Studio integration and designer support. Plus it can also be integrated with other third party .NET controls.

XSL Formatter Standard V4.2

Format XML/XSL-FO documents, data and forms at high speed.

- Supports most Unicode languages including Latin, Cyrillic, Greek, Japanese, Chinese, Hangul, Arabic, Hebrew and Thai
- Can produce high quality PDF files

XSL Formatter

XSL Formatter offers a clear GUI, support for over 50 languages, PDF generation, W3C compliance, extensions and formatting capabilities, unlimited document size and SVG support. In addition XSL Formatter offers vector support for EMF and WMF, CMYK support, and wide ranging output capabilities such as MathML native drawing, WordML

transformation, XSL Report Designer integration and PDF enhancement.

It offers the ability to write in vertical mode, to run the text from right to left as in Arabic and Hebrew and also to create multilingual documents with language mixtures on the same page and even on the same line.

AG-TECH

Btrieve Classes for .NET V2.0

Fast, easy to program access to Pervasive.SQL databases from .NET.

- Provides direct access to Pervasive's transactional interface from within .NET
- Extended class enables maximum performance when searching Pervasive data

Btrieve Classes for .NET

Btrieve Classes for .NET is a set of .NET database access support classes that enable fast, easy to program access from .NET programs to Pervasive.SQL databases via the Btrieve API. As such they greatly help developers looking to write .NET programs accessing data in Pervasive.SQL databases or those looking to migrate existing pre-.NET Btrieve/Pervasive applications to .NET.

Btrieve Classes for .NET performs with greater efficiency and hence faster than ADO.NET or Pervasive's OLE DB provider.

This product includes two types of class library the first (DDF Class) is specifically designed for the .NET Framework and composed of classes that enable smart and efficient access to column data and definition of data type conversion code. The second type of class (Native Class) provides Btrieve API level access from .NET managed code.

Btrieve Classes for .NET includes full support for Pervasive PSQL v9 and Visual Studio 2005.

Aurigma

Graphics Mill V2.0

Add comprehensive imaging functionality into your applications.

- Fast and memory-friendly image processing
- Reliable architecture which prevents memory leaks and deadlocks
- Supports JPEG, PNG, GIF, WBMP, TIFF and BMP

Graphics Mill

Graphics Mill is a set of fast and memory-friendly components which resolve most image processing requirements. It can load/save files of most popular formats, enhance, transform, display, reduce colors, combine images, draw imagery, etc.

Graphics Mill also includes a handy control which allows you to zoom, pan, scroll image, select areas of the image.

Graphics Mill allows you to apply color management (using ICM 2.0) to your images, so you can handle CMYK images gracefully. You can also combine images with full support of alpha channel and various combine modes (such as Add, Xor, Subtract, Texturize, Screen, Overlay and others).

It includes an intuitive API which is easy for ASP & VB programmers to use.

Change Vision

JUDE V5.1

Business process UML modeling tool.

- Edit model information directly, without opening dialog boxes
- Supported diagram types include Class, UseCase, Sequence, Collaboration, StateChart, Activity, Component and Deployment

JUDE

JUDE includes basic features to make modeling simple and user friendly. JUDE is suitable for business use, handling large-sized models and document creation. It includes enriched features, such as the ability to change your view freely using a map view, zoom by dragging, unlimited undo/redo, the ability to output project information to a CSV file, automatic generation of class diagrams with model information, diagram creation guidance and more. JUDE supports the basic UML

1.4 diagrams including: UseCase, Sequence, Collaboration, Statechart, Activity and Class (Object/Package/Robustness).

You can lock project files from other users, set the font for the whole project file and configure print setting for each diagram. JUDE also lets you display multilingual aliases (e.g. English and Japanese) on diagrams, export diagrams to RTF and HTML documents and generate Class diagrams from Class files.

Chant

Chant Developer Workbench 2007

Comprehensive development and testing environment for working with speech.

- Generate word pronunciation phonemes
- Create and edit lexicon using XML
- Invoke speaker training

Chant Developer Workbench

Chant Developer Workbench is comprised of tools and components for developing software that speaks and listens. As an interactive toolset, it provides a development and testing environment for working with the component libraries and the speech technology objects they manage. You can manage grammars, profiles, lexicons, recognizers, synthesizers, and text-to-speech markup interactively and directly within application software you develop and deploy.

Within the Chant Developer Workbench interactive environment, you can: create and edit grammars in native grammar syntax, generate word pronunciation phonemes, compile and debug grammars, manage lexicons, create and edit lexicon using XML, generate word pronunciation phonemes, edit word pronunciation phonemes, import and export lexicon word pronunciations, manage speaker profiles, enumerate speaker profiles for selection and command line testing and more.

Compuware DevPartner Studio Professional Edition V8.2

Build reliable applications and components for .NET and Windows.

- Simulate .NET Framework faults and test error handling code
- Export memory, performance and coverage data into useful reports
- Supports full Visual Studio 2005 integration

DevPartner Studio

DevPartner Studio Professional Edition helps developers build reliable, high-performance applications and components for .NET and for native Windows by quickly solving problems with .NET migration, legacy integration, locating errors in code, memory analysis, tuning runtime performance across distributed applications, and assuring thorough

testing. DevPartner's memory analysis shows you the amount of memory consumed by an object or class, tracks the references that are holding an object in memory, and identifies the lines of source code within a method responsible for allocating the memory. DevPartner Studio Professional Edition integrates with Visual Studio .NET 2003 and 2005 and Visual Studio 6.

Data Techniques ImageMan.Net Twain V2.5

Scan and acquire images from twain devices.

- Object oriented design simplifies development of scanner enabled applications
- Support for setting, getting and negotiating all TWAIN capabilities

ImageMan.Net Twain

ImageMan.Net Twain toolkit is a set of 100% managed .NET WinForms controls and classes for building applications capable of scanning and acquiring images from TWAIN compatible cameras and scanners. It returns image data as .NET Bitmap objects allowing them to be easily integrated into your applications. Image control properties such as

Brightness, Contrast, Orientation, ScanArea, Resolution, PixelType and PaperSize properties simplify setting common scanning parameters.

Support for Internet Explorer allows the controls to be used in browser based applications eliminating the need to manually install applications on client machines.

Crownwood Software DotNetMagic V5.3

Create Microsoft Office style applications in minutes.

- Provide VS 2005 style docking windows with docking indicators
- TabbedGroups control provides flexible, customizable MDIs
- Includes a high performance, scalable tree control

DotNetMagic

DotNetMagic user interface library provides Office 2007 style rendering including the blue, silver and black office schemes. It also has a docking window system that offers all the features found in Visual Studio .NET. It mimics the appearance of Visual Studio .NET and features; multiple content in same row or column, multiple content inside same docking window, the ability to restore windows in same row or column and an auto hide capability just like Visual Studio .NET. The TabbedGroups control provides a similar ability to organise documents

as found in Visual Studio .NET. The window docking features include, edge docking, floating, pinnable, sliding auto hide and hide and show. The customizable Tree control includes: none, single or multi-select modes, support for XP Themes, groups and list style and full color customization.

Full source code, 12 months of updates and 12 months email support is included. Visual Studio 2005 compatible. C# and VB.NET samples included.

DBI Technologies

Solutions::Schedule for .NET V2.0

Build team management and resource planning solutions.

- Share schedule, appointment, contact, location and task information
- Supports TimeBar linking, cell-level formatting, multi-select TimeBar and more.

Solutions::Schedule for .NET

Solutions::Schedule for .NET allows developers to create scheduling solutions such as those found in the healthcare or services sector. Solutions::Schedule .NET includes intuitive mouse driven scheduling and planning with Gantt-style project management features. Other features include independent cell formatting, timebar overlap, split and linking

styles. You can easily add a visual reference point for the current date and time in a schedule by using the Current Time Line feature. Time lines extend vertically through the schedule area and are drawn along the major time segments. Developers can also add Zoom-in/out capabilities by programmatically changing the value of the TimeDistance property.

dBarcode 1D Developers Kit V8.1

Create barcodes from within your applications.

- Supports EAN/UPC, Code 39, Code 128/EAN 128, Codabar, Telepen, and many postal barcodes
- Fully supports Office 2000/2002, 2003 and 2007 and Windows 2000, XP and Vista.

dBarcode 1D Developers Kit

dBarcode 1D Developers Kit allows developers to generate barcodes directly from within a variety of development environments. It supports over 50 major barcode types including Code 128, Code 39, EAN, UPC, etc. Each unit enables the developer to set the code data, code type, size, human readable font properties and alignment, bearer

bars, orientation, background and foreground colors all from within their application. It includes an ActiveX DLL for use in Visual Basic, VBA (eg MS Access) and C/C++, and Delphi components (based on TImage).

A 32-bit OLE server is also included for OLE-enabled Windows applications.

SMSC Connectivity SDK V2.1

Accelerate the development of two-way SMS and EMS messaging applications.

- Encapsulation of SMSC communication protocols
- Worldwide deployment possible, tested with all major SMSCs
- Easy-to-use and well-structured developer API

SMSC Connectivity SDK

SMSC Connectivity SDK prevents you from the time-consuming implementation of sophisticated low-level communication protocols (UCP, SMPP, Sema OIS, CIMD2) needed for high-speed messaging applications with direct SMSC access. Your application will be mobile messaging enabled within a few days.

It includes a COM developer toolkit for mobile messaging that enables sending and receiving of SMS/EMS via direct SMSC links (up to 40 messages/second). It encapsulates all major SMSC

communication protocols: SMPP, UCP, Sema OIS and Nokia CIMD2 and supports all major SMS formats including 7bit ASCII, 8bit binary, EMS, Unicode, Flash-SMS, picture messages, logos, ringing tones, group graphics and smart messages.

SMSC Connectivity SDK includes SMSC connectivity for both TCP/IP and X.25 as well as delivery notifications. Also included is an easy-to-use and well structured developer API, comprehensive documentation and samples.

FOSS Software

Prof-UIS V2.81

Create professional, modern user interfaces for your Windows applications.

- Microsoft Office 2000/XP/2003 and Visual Studio 2005 look-and-feel
- Includes: tabbed docking windows, tab containers, data grid and property grid controls

Prof-UIS

Prof-UIS is an easy-to-use MFC extension library that enables you to deliver Windows applications with a professional and user-friendly interface. More than 200 thoroughly tested and documented C++ classes, templates and interfaces will help you take the time and complexity out of incorporating rich and up-to-date GUI facilities in your projects including: Office 2000/XP/2003 and Visual Studio

2005 look-and-feel, ribbons, tabbed docking windows, tab containers with detachable tabs, extremely customizable data grid and property grid controls, customizable menus, toolbars and keyboard accelerators, multi profile GUI persistence and more. Prof-UIS is an extensible, object-oriented framework that enables you to easily customize and extend its functionality.

Instrumentation ActiveX Library V3.5

Provide visual gauges for technical applications.

- A suite of instrumentation interface controls
- Provides full control over instrument properties
- Very simple and intuitive to configure

Instrumentation ActiveX Library

Instrumentation ActiveX Library is a suite of 11 common instrumentation interface controls including Angular Gauge, Knob, LED, Linear Gauge, Numeric LED, Odometer, Percent, Selector Knob, Slider, Strip Chart, and Toggle. Each component gives you full control over instrument properties including scales, captions, tics, etc. Angular Gauge allows multiple scales,

needles, captions and tics. Linear Gauge allows multiple scales, knobs, captions and tics. Numeric LED allows you to build your own digital clock with an easy-to-use alpha-numeric component. Odometer offers a numeric display similar to automobile odometer or tripometer. Toggle switch control has bitmap and sound playing capabilities.

Gravitybox Software

Gravitybox WebSchedule.NET V3.8

Add scheduling capability to your ASP.NET applications.

- Renders schedules as standard HTML which can be placed on a Web page inside an ASP.NET app to provide scheduling to your users
- Supports events, colors, schedule areas, data binding, and more

Gravitybox WebSchedule.NET

Gravitybox WebSchedule.NET is a logical extension of the WinForms Schedule.NET component. Like its predecessor, it can display schedules in many viewmodes but in a browser. The component renders the schedule as standard HTML. This allows you to place it on a web page inside of a larger ASP.NET application to provide robust scheduling to your users.

of almost any type, in many, different formats. The component will display information in the common grid format with time and dates on opposing axes. It will also allow you to transpose the axes, as well as specify the increments on the each one. It can display an arbitrarily large schedule, allowing for years at a time to be view and scrolled. There are also conflict resolution routines that can determine if a change will cause a conflict with other appointments.

Gravitybox WebSchedule.NET can be used to display scheduled information

Graphics Server Technologies

Graphics Server .NET V4.0

Add rich charting functionality to your .NET applications.

- Includes data binding properties for Windows Forms and ASP.NET
- Bind to data sources created in Visual Studio at design time
- Includes FunnelVertical chart type and DigitalClock widget

Graphics Server .NET

Graphics Server .NET provides a comprehensive, flexible solution for adding graphs, charts and widgets to both Web and Windows applications. Graphics Server .NET includes features like drilldowns, 'live charts', mouse events and built-in statistical features. It lets you add sophisticated graphs and charts in just minutes with the Interactive Designer. Chart types include: pie (2D & 3D), doughnut, line

(2D & 3D), 100% stacked, area (2D & 3D), horizontal bars (2D & 3D), 100% stacked, pareto, vertical bars (2D & 3D), bubble (2D & 3D), candlestick, high, low, open close, volume, range, funnel, Gantt, multi-segment, polar, radar, scatter etc.

Honeywell

FileNavigator V1.0

Navigate local and network drives from within your .NET application.

- Provides Windows Explorer-like file viewing functionality
- Can see files on network as well as local computer
- Standard file and folder tree view look and feel

FileNavigator

Honeywell FileNavigator provides Windows Explorer-like file viewing functionality for .NET applications. Developed in C#, this control gives full file view not only to files on the local computer, but to files on the local network as well. It uses a traditional file and folder look and feel, supports standard multiple file selection techniques, drag and drop (with other .NET components) and file sorting capability. Other features include: context (right-click) menus, multiple file sorting options and

more. It comes with several classes including: FileNavigator which defines a user interface to the folder and file structure of the computer. FileNavigatorControlEvents which defines the event arguments used when changes in state occur. FolderTree which defines the user interface, methods and properties for navigating through a directory structure in a treeview, and FolderTreeEventArgs which defines the arguments that are passed when a FoldersChanged event occurs.

Inabyte InaCalc.Net V3.02

Enable advanced calculations in your accounting or spreadsheet application.

- Integrates expression parsing, evaluating, and dependent formula recalculation
- Includes custom function support and multiple formula recalculation

InaCalc.Net

InaCalc.Net supports conventional math operators and functions and is suitable for heavy-duty number crunching. It also supports other data types, such as string, date-time, and logical and comes with operators and functions for these data types. It allows defining variables and sets of related formulas that implement spreadsheet-like recalculations. The InaCalc.NET

component integrates expression parsing, evaluating, and dependent formula recalculation. It is useful in two general areas; when: a formula has to be defined and evaluated at runtime.

The product supports spreadsheet-like multiple formula recalculation, as well as custom function support and virtual variables.

Indigo Rose Setup Factory V7.0

Create professional installations using a clear visual design environment.

- Wizard based creation of installation packages (no coding needed)
- Code editor for advanced developers to 'fine tune' installations
- Extensive customization through actions library, themes and skins

Setup Factory

Setup Factory offers developers a solution for creating flexible installation systems without needing to learn a proprietary scripting language. It further sets itself apart by providing the customization and advanced control features that developers require, all from within the Setup Factory Visual Design Environment. You can even deploy your applications for Web servers. Setup Factory contains

a scripting engine that offers all the usual programming logic such as loops, functions and arrays and more.

Setup Factory includes a handy action wizard that makes it easy, even for someone with zero programming knowledge to simply click to add actions. Also included is a script editor that makes it easy for advanced users to edit code directly.

A REALLY SIMPLE SERVICE BUS

Easily create and publish dynamic RSS Feeds from Databases, Spreadsheets, Directories, or other information sources. Using the included connectors you can connect to and publish all kinds of data, and by downloading additional Connectors you can extend RSSBus even further.

EASILY CREATE RSS 2.0 / ATOM FEEDS

Subscribe to the information that YOU want. RSSBus can generate dynamic RSS Feeds from any source using any of the pre-built connectors, or through custom connectors that extend RSSBus.

EASILY CREATE FEEDS FROM:

- **CRM Systems** (Salesforce, Microsoft CRM, SugarCRM etc.)
- **EBay, Amazon, Yahoo**, or other online sales accounts.
- **Active Directory** to watch for new user accounts.
- **Credit Card and Bank Accounts** to monitor for fraudulent activity.
- **Accounting Packages** like Quickbooks or Peachtree.
- **File System or Network Share** to keep track of file changes.
- **Database Queries** (SQL, Oracle, TSV, Excel, etc.)
... and much more!

AUTOMATE AND CONNECT DATA

Use Feeds as simple web services - use any of the dozens of pre-built connectors to pipe data between any data source. Automate and streamline business processes by moving RSS items through simple RSBScript workflows.

SIMPLE WEB APPLICATION API

RSSBus Feed Server can be easily integrated with any web site or web application providing a REST-like service endpoint. Use RSSBus to create dynamic RSS Feeds, or use RSSBus as an integration component for interfacing with other data sources directly.

RSSBUS FEED SERVER FEATURES

Based on a Fully Extensible Plug-in Architecture - RSSBus Feed Server is designed for extensibility with easy creation of new RSSBus Connectors, new output formats (JSON, ATOM, Excel, etc.), and extensible logging & security.

Enterprise Class Security and Performance - As a fully managed ASP.NET application, the RSSBus Feed Server leverages the rich features of IIS and ASP.NET for security and performance to provide a solid platform for Feed-based SOA.

User-friendly Web Based Interface - Easy-to-use Feed creation wizards walk through the process of creating, configuring, and exposing RSS Feeds.

Templating and Data Transformation - Customizable output templating provides limitless possibilities for data integration.

Support for SSL Security (Secure RSS) - Leveraging IIS, RSSBus Feed Server is enabled with secure data communications using strong SSL encryption and digital certificates.

RSS Feed Authentication - Based on ASP.NET and IIS configuration, feeds can be configured to require various authentication schemes including Basic, NTLM, etc.

Logging and Performance Monitoring - Advanced error logging and reporting facilities for monitoring feed errors, application errors, or user defined parameters.

it-partners.com

List Controls for .NET WinForms V1.0

Add advanced list and combo functionality to your .NET applications.

- Improve usability with superior layout and UI functionality
- Extremely fast data management, including loading, sorting and filtering
- Windows XP & visual styles support

List Controls for .NET WinForms

List Controls for .NET WinForms is a .NET custom control package including itList and itCombo which are replacements for the following .NET controls: ListBox, CheckedListBox, ListView (list or details mode) and ComboBox. In addition, itList is a grid control replacement (where in-cell user editability is not required). List Controls for .NET WinForms provides data management, data presentation and improves end user experiences. Both controls are easy to learn, simple

to use, highly customizable, reliable and fast. It includes an intuitive object model - including objects such as ListColumn, ListColumnCollection, ListColumnRange, ListRow and ListRowRange and several 'display styles' to provide a simple means to control item presentation (background and foreground color, font etc.). Full support for standard keyboard and mouse operations is included plus an auto find type-ahead (auto-complete) style interaction.

PDF4NET .NET Class V3.2

PDF enable your .NET applications.

- Create and edit PDF files and perform automated PDF form filling
- Unlimited pages per document, each with its own size and orientation
- Now supports PDF annotations, layers and alpha transparency

PDF4NET

PDF4NET is a .NET library for creating, editing and filling PDF files on the fly from any .NET application. The library provides a simple API that allows you to create complex PDF documents, or to edit existing PDF files with a few lines of code. Its core functionality can be divided into 3 main areas: PDF creation, PDF editing and PDF forms filling.

Other features include native support for most 1D and 2D barcodes and the ability to create headers, footers, page templates and layers. The library provides support for both standard .NET framework and Compact .NET framework. Project costs are reduced when developing with PDF4NET because it can be distributed royalty free.

PDFlib+PDI V7.0

Create PDF files from within server-side or client-side software.

- Includes functions for creating text, graphics, images and links
- Adds full support for LZW-compressed TIFF and GIF images
- Incorporate existing PDF pages in your generated output

PDFlib+PDI

PDFlib is a development tool for PDF-enabling your software or generating PDFs on your server. PPDFlib offers a simple-to-use API for programmatically creating PDF files from within your own server-side or client-side software.

PDFlib+PDI includes all PDFlib functions, plus the PDF Import Library (PDI) for including existing PDF pages in the generated output. PDI allows you to add text, images, barcodes and more to existing PDFs.

PDFlib doesn't make use of third-party software for generating PDFs, nor does it require any other tools.

PDFlib is available for all major operating environments and development environments.

Pintexx

pinEdit Desktop V6.1

Add a WYSIWYG HTML editor to your applications.

- No client side installation
- True WYSIWYG editing
- Can be configured to return XHTML compliant content

pinEdit

pinEdit is a WYSIWYG HTML editor that runs in your ActiveX or .NET Windows Forms application. pinEdit editor includes three view modes (Edit, HTML source and Preview), rich text formatting (font size, family, bold, italic, underline, justify, indent, outdent, font color, background color etc.), cut, copy, paste, undo and redo functions. You can also insert images and tables with

context menus into documents, edit hyperlinks and display numbered and bulleted lists.

Other features include: Word like color selectors, absolute positioning of controls, zooming and the ability to insert objects (Button, input, check, radio, listbox combo, area).

plexityHide.com GTP.NET V3.0

Add interactive Gantt charts and scheduling to your applications.

- Supports AJAX with client-movable and resizable time items
- Features asynchronous collision detection and handling of time items
- Security awareness enables deployment on XBAP or ClickOnce

GTP.NET

GTP.NET is a complete .NET re-write of the best-selling Gantt Time Package. It's overall goal and purpose is to let you visualize and manipulate time based information.

GTP.NET includes a collection of user interface components which handle time blocks. The time blocks are displayed in a Gantt chart or a schema view. The times are connected to an owner, for example a person or an activity in a project. You can also use it

to display dependencies and collisions between times, which gives the end user a graphical way to view and modify the project. GTP.NET includes the ability to select and re-assign links and also provides databinding for links between time items.

GTP.NET includes three pre-built sample applications for a Project Planner, Resource Booker and Weekly Planner. All 3 samples are short and to the point of the problem they solve.

PureComponents PureComponents Ultimate Suite

A suite of over 70 user interface components.

- Create application user interfaces with the MS Office 2007 style
- includes components for navigation, data entry, treeview, listview, Ribbon user interface

PureComponents Ultimate Suite

PureComponents Ultimate Suite currently includes: PureComponents EntrySet Suite, PureComponents RibbonUI, PureComponents Navigator and PureComponents Treeview. RibbonUI is set of components for creating application user interfaces in an Office 2007 style. RibbonUI replaces the current system of layered menus, toolbars and task panes. TreeView

extends the standard TreeView object model found in the .NET Framework. Navigator is based on the well-known Outlook Bar style but with extended functionality.

PureComponents Ultimate Suite is compatible with Visual Studio 2005/2008 and includes VB.NET and C# examples. Source Code is available.

PreEmptive Solutions Dotfuscator V4.2

Make your .NET applications smaller and more secure.

- Protect your programs against hackers attempting to steal intellectual property or find application security holes
- Decreased application size and better performance

Dotfuscator

Dotfuscator allows you to significantly enhance the security of your software development assets and substantially decrease your application's size. The benefits to you include superior intellectual property protection, decreased application size and better program performance. Dotfuscator Professional Edition is part of the obfuscation process that integrates obfuscation functionality into the application development lifecycle supporting the development, testing, integration, manufacturing, application

support and patch management phases of development.

Dotfuscator contains many important features such as Control Flow Obfuscation, String Encryption, Incremental Obfuscation, Enhanced Overload Induction and Pruning. It rearranges code instructions while preserving the original runtime logic. It removes the telltale patterns that decompilers use to recognize (and reconstruct) higher-level program code constructs.

Raize Software Raize Components V4.1

Build professional-looking Delphi and C++ Builder applications.

- Integrates into CodeGear RAD Studio 2007 IDEs (including Delphi 2007 and C++Builder 2007)
- Component designers simplify the task of creating a user interface
- Designed for reuse and extensibility

Raize Components

Raize Components is a collection of more than 125 native VCL components for use in Delphi and C++Builder. It includes a large selection of visual components for you to choose from, each designed for complete flexibility via an extensive set of interfaces. Each component is designed for utmost flexibility through an extensive set of properties and comes with complete

source code, packages and designers.

In addition to the core set of controls, Raize Components includes more than 100 component designers focused on simplifying user interface development. Now more than ever, developers use Raize Components to build sophisticated user interfaces in less time with less effort.

Resco

Resco MobileForms Toolkit V5.3

Smart development for mobile devices.

- Includes grid, calendar, listview, input form, zip compression, navigation and touchscreen signature controls
- Now features a chart control with five chart types

Resco MobileForms Toolkit

Resco MobileForms Toolkit is a suite of components designed specifically for mobile devices. It includes advanced designers, support of quick data loading, standardized mobile user interface, enterprise samples and many other features. It is fully integrated with Visual Studio .NET. Resco MobileForms Toolkit contains Resco AdvancedList .NET, Resco AdvancedTree.NET, Resco CompactChart .NET, Resco DetailView .NET, Resco SmartGrid .NET, Resco Zip .NET, Resco and Resco OutlookControls .NET.

All Resco MobileForms Toolkit components have been specifically designed so they perfectly fit small displays of mobile devices. Special optimizations such as Resco DelayLoad technology ensures performance is optimized even on devices with limited memory and processor capabilities.

All UI controls are available from the Visual Studio Toolbox and Help files are integrated into the Visual Studio Help system.

Sax.net

Crescent QuickPak V4.5

Visual and Performance enhancement for Windows (inc. XP SP2) applications.

- Custom data entry, editing and presentation controls for ActiveX
- Search, Encrypt, Date / Time, Hardware interface and more functions

Crescent QuickPak

Crescent QuickPak is a comprehensive collection of 32-bit ActiveX components for developing applications using Visual Basic that will reduce development time and increase productivity. It includes the following custom controls; calendar display, caption, enhanced frame and checkbox, extended command button, enhanced combo box, form enhancement, hypertext, frame and option button, data-specific input/edit controls, enhanced list boxes, additional display controls. It has low-

level routines for fast performance. You can sort arrays of all data types, even for large (>64K) arrays of any record size. Load and save arrays in a single operation and get simplified access to Windows API services. No knowledge of the Win32 API is needed, all routines are easy to call, with simple names and intuitive calling syntax. It also has high-level methods such as, all financial and statistical routines in Lotus 1-2-3. File operations: searching and encryption, copying on wild card specifications, file access routines, error-handling, etc.

Ripple Systems

Impact Expression V1.0

Semantic object driven diagramming.

- Visualizations can be generated automatically by tying graphic and layout components directly to business objects
- Includes real-time updating of the diagram as object properties change

Impact Expression

Impact Expression is a semantically driven diagramming component that can easily add rich diagramming capabilities to any project. Visualizations can be generated automatically by tying graphic and layout components directly to business objects representing Flow Charts, Business Processes, Workflow, etc.

Impact Expression allows you to drive the diagram with business objects instead of just shapes. This allows for rapid integration into your business

systems, including real-time updating of the diagram as object properties change. Shape templates and the mappings from business objects into their representative shapes are defined in an easy to use XML file. Semantic mappings allow the developer to specify an association between a particular business object and a shape representation for that object. Specific properties (both single-valued and lists) can be associated with properties of the Shape.

Seekford Solutions

FTP Wizard V3.0

Add FTP support to your Windows applications.

- Add functionality without learning the complexities of FTP or TCP/IPs
- Includes samples for Visual Basic, Visual FoxPro, Visual C++, ASP and VBScript

FTP Wizard

Seekford Solutions FTP Wizard allows you to easily upload and download files from an FTP server. Using the File Transfer Protocol, you can get directory listings, make directories, delete files and directories, rename files, upload and download files. The product makes implementation simple. It provides an interface to the File Transfer Protocol, allowing developers to implement

this functionality without learning the complexities of FTP and TCP/IP. Multiple instances of FTP Wizard can be created to talk to multiple FTP sites at a time.

FTP Wizard includes asynchronous operation and allows you to create applications that require no user interaction.

ActiveReports—Advanced Report Designer

For Visual Basic® and Visual Studio® .NET developers who need to generate a wide variety of reports, ActiveReports is a powerful and easy to learn designer. Unlike any other report writer, ActiveReports takes full advantage of the design environment's powerful, familiar language and data binding capabilities. ActiveReports for .NET 3.0 features many new exciting enhancements, including design-time support for .NET data components.

Data Dynamics

ActiveReports for .NET

Got Data? Show It!

SharpGraph for .NET—Advanced Graph Control

SharpGraph for .NET is an advanced charting tool for Windows® Forms applications. It is a fully managed component and provides integration with the Visual Studio .NET environment. SharpGraph offers built-in support for 2D and 3D chart types, data binding capability, and fully customizable graph elements such as titles, labels, annotations and legends.

Data Dynamics

SharpGraph for .NET

Data, Picture Perfect.

SharpUI for .NET—Visual Studio .NET UI Tools

SharpUI presents a complete toolkit of user interface controls to give your Visual Studio .NET applications a sharp and consistent look and feel. It provides all the components you need to match today's modern applications. The components include XP-like toolbars, menus and dockable tool windows, a comprehensive set of databound input controls, a complete set of panel controls, and a StyleManager to provide a uniform look and feel.

ActiveBar 3.0—Premier Toolbars & Menu Control

ActiveBar 3.0 delivers Microsoft® Office and Visual Studio toolbars, menus, and dockable windows emulation in a small and easy-to-use ActiveX control. ActiveBar 3.0 removes the limitations of the system menus and toolbars and allows you to provide complete run-time customization and personalized environments in your applications.

ActiveBar

Everything Docks!

DynamiCube—Internet-Enabled ActiveX Control

For professional Windows developers integrating data analysis into DSS/EIS applications, DynamiCube is a lightweight ActiveX control that provides flexible analytical interaction with large databases, giving users the advantage of multi-dimensional databases without creating one. DynamiCube 3.0 adds native exporting to Excel and HTML, an updated layout editor, MDX query wizard, reporting enhancements, and much more.

Data In, Insight Out.

SharpGrid—Comprehensive ActiveX® Grid Control

For professional Windows developers, SharpGrid is a full-featured, database-aware ActiveX grid control. It can be used in bound (both OLEDB and ICursor), unbound, and virtual data modes. SharpGrid has all features expected from a modern grid control and unique features such as group calculations, row filtering, preview pane, stage-driven custom draw model, XML and CSV import/export, persistable XML layouts, HTML export, scroll tips, cell tips, frozen columns and rows, and Alpha blending.

SlickEdit

SlickEdit for Windows 2007

Create, navigate, modify, build and debug code faster and more accurately.

- Features include auto-completion, automatic comment wrapping, smart line selections and syntax expansion
- Now provides automatic XML/HTML formatting as you edit

SlickEdit

SlickEdit is a multi-platform, multi-language code editor supporting 8 platforms, over 40 languages, and 13 editor emulations. It can be used as a standalone development environment or as a complementary editor, providing programmers with a tool to create, navigate, modify, build, and debug code faster and more accurately. SlickEdit's features include Code Navigation, Preview Tool

Window, References Tool Window, Syntax Expansion, Surround With, Auto-Completions and many more.

Write more code in less time and spend less time waiting for results. Programmers can type fewer characters and make fewer errors using syntax expansion, completions, aliases, and code templates.

Wise Solutions

Wise Installation Studio V7.0

Create installations for desktop, server, Web or mobile platforms.

- Build either MSI or WiseScript installations with a few mouse clicks
- Minimize reboots using the Vista Restart Manager Infrastructure
- Supports XML Web services, 64-bit, virtualization and more

Wise Installation Studio

Wise Installation Studio provides you with a comprehensive collection of tools and technologies for authoring software installations for Windows devices. Wise Installation Studio supports multiple installation technologies including Microsoft Windows Installer (.MSI) and WiseScript formats. You can also create installations for .NET applications,

client-server applications, and mobile device applications. It features advanced installation authoring technology such as support for virtual packages, mobile devices, and digital rights management. The new Virtual Package Editor lets you create and edit a virtual software layer, a virtual software project file (.WVP), or a virtual software archive file (.VSA).

SourceGear Corporation

SourceGear Vault V4.0

A compelling replacement for Visual SourceSafe.

- Offers full integration into the Visual Studio .NET environment
- Now includes an Eclipse client and better VS2005 integration
- Client/Server communication over HTTP or optionally with SSL

SourceGear Vault

SourceGear Vault is a version control system for Windows developers, with full integration into the Visual Studio .NET environment. SourceGear Vault is implemented entirely in the .NET Framework and uses SQL Server 2000 for its repository storage. SourceGear Vault is designed specifically to offer a seamless transition from Visual SourceSafe and includes an import tool which can be used to migrate

data from a SourceSafe database into a Vault repository; every version of every file is imported, including all the history.

SourceGear Vault's basic architecture is a centralized Vault server which manages one or more repositories. It includes several client applications and also provides a way to create custom clients using any .NET language.
